

39-36 災害被災者の「防災・減災」意識調査と ハザードマップ策定への提言

沿岸域環境科学教育研究センター 特定事業研究員 森本剣太郎
" 教授 滝川 清

Recently, the citizens have been become more nervous about disaster prevention and reduction, because a lot of natural damages happen frequently and lager-scale all over the world. The questionnaire research was carried out for the residents suffered from the storm surge, the flood and the others at Kumamoto. As result of analysis, the residents living Kumamoto were suffered form disasters more than the whole country, and they hope the hazard map like that the disaster information be able to seen and used easily more. Finally, we propose that hazard map content not only the natural disaster information but also safety life information including daily lives.
